Introduction of LLM

Large-scale Language Model

Input experience

Teach computers knowledge via rules for symbolic processing.

Mechanisms of the human brain

Decipher brain mechanisms to replicate human intelligence.

Learn from data

Through data-driven approaches, ML methods emulate human intelligence.

[Learn From Data](#)

LLM = Learn from data + Inspired by human brain + Input experience

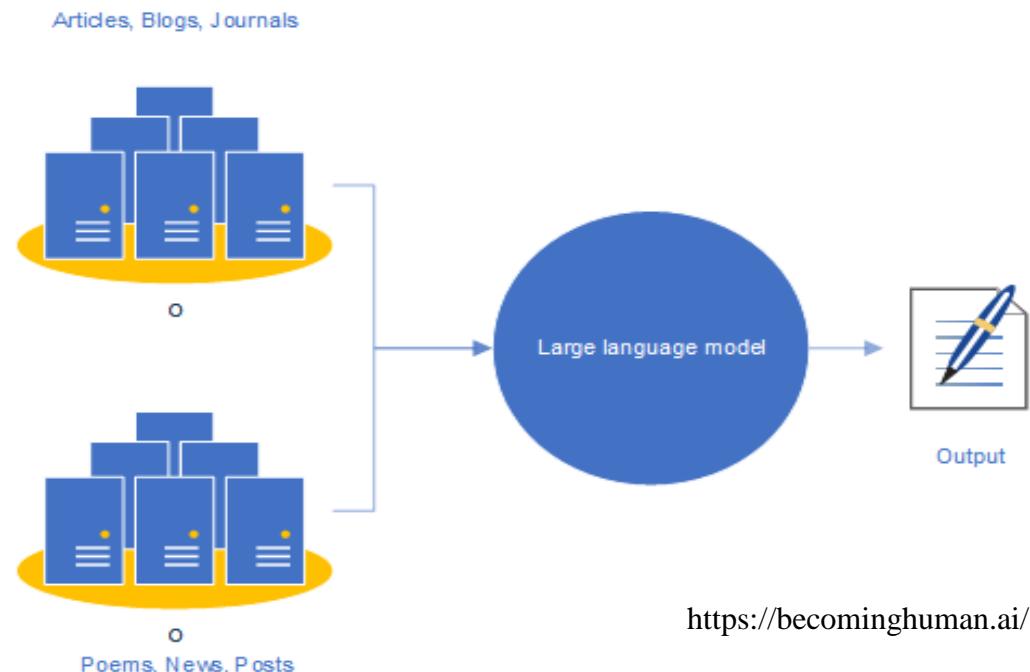

What Are Large Language Models?

Large **language models** (LLMs) are Transformer-based models trained on extensive unlabeled text via self-supervised or semi-supervised learning, designed to produce natural, context-relevant text in various styles and formats.

LLM

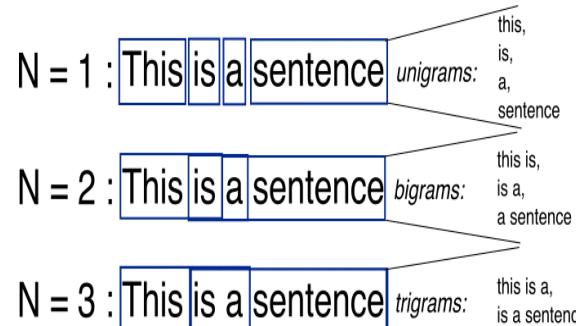

**Large-scale Pre-trained
Language Model (PLM)**

The Main Architecture of GPT --- RLHF

Step 1

Collect demonstration data and train a supervised policy.

A prompt is sampled from our prompt dataset.

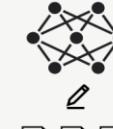

Explain reinforcement learning to a 6 year old.

We give treats and punishments to teach...

SFT

A labeler demonstrates the desired output behavior.

Step 2

Collect comparison data and train a reward model.

A prompt and several model outputs are sampled.

Explain reinforcement learning to a 6 year old.

A In reinforcement learning, the agent is...
B Explain rewards...
C In machine learning...
D We give treats and punishments to teach...

D > C > A > B

A labeler ranks the outputs from best to worst.

This data is used to train our reward model.

RM

Step 3

Optimize a policy against the reward model using the PPO reinforcement learning algorithm.

A new prompt is sampled from the dataset.

Write a story about otters.

Once upon a time...

r_k

The PPO model is initialized from the supervised policy.

The policy generates an output.

The reward model calculates a reward for the output.

The reward is used to update the policy using PPO.

喀什市第一人民医院泌尿外科如何？请你综合评价一下

喀什市第一人民医院泌尿外科是当地的一个主要医疗机构，在医疗服务和技术水平上有所保障。根据目前公开的资料和评价，这个科室通常能够为患者提供较为全面的泌尿系统疾病治疗服务，包括常见的尿路感染、泌尿结石、前列腺疾病等治疗，且在手术技术方面也有一定经验。

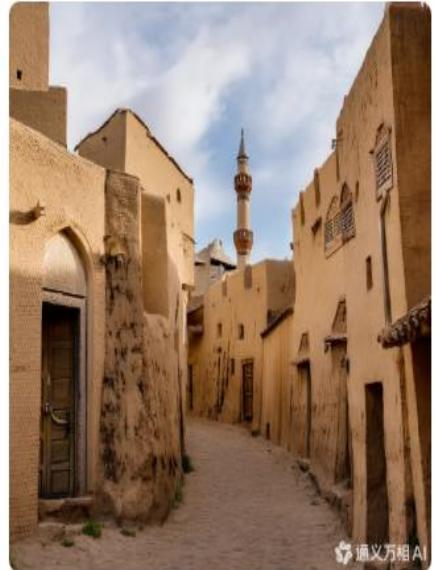

- 医疗水平和技术：**喀什市第一人民医院泌尿外科具备一定的技术能力，部分患者反映治疗效果较好，特别是对于一些常见疾病的诊断和治疗。在一些较为复杂的手术中，科室的技术水平也有不断提升。
- 医生团队：**科室内的医生通常有较为丰富的临床经验，尤其是在常见疾病的诊断和处理上较为娴熟。不过，具体的医生水平还要根据患者的个人体验来评估。
- 设备和环境：**医院的设备在泌尿外科领域也能满足大多数诊疗需求，现代化的检查设备和治疗设备都有提供，但与一线大城市的医院相比，设备的更新和全面性可能有所差距。
- 患者反馈：**部分患者对治疗效果表示满意，尤其是在术后护理和长期随访方面，医院有一定的服务保障。然而，也有一些患者对等待时间较长和部分服务的响应速度提出过意见。
- 综合评价：**总体而言，喀什市第一人民医院泌尿外科作为一个地方性医院，能够为患者提供基本的医疗服务。对于一些常见的泌尿系统疾病，科室具有一定的诊疗能力，适合常规治疗，但对于复杂或高难度的疾病，可能需要考虑转诊到大城市的专业医院。

如果有具体的疾病或治疗需求，建议咨询医生并了解其具体治疗方案和医生资质。

给我生成一张喀什市古城的照片

Huatuo GPT-II ---- Demo1

长期大量服用哪种维生素会引起严重的神经感觉异常，导致进行性步态不稳、足麻木和手不灵活？

模型内部深度思考

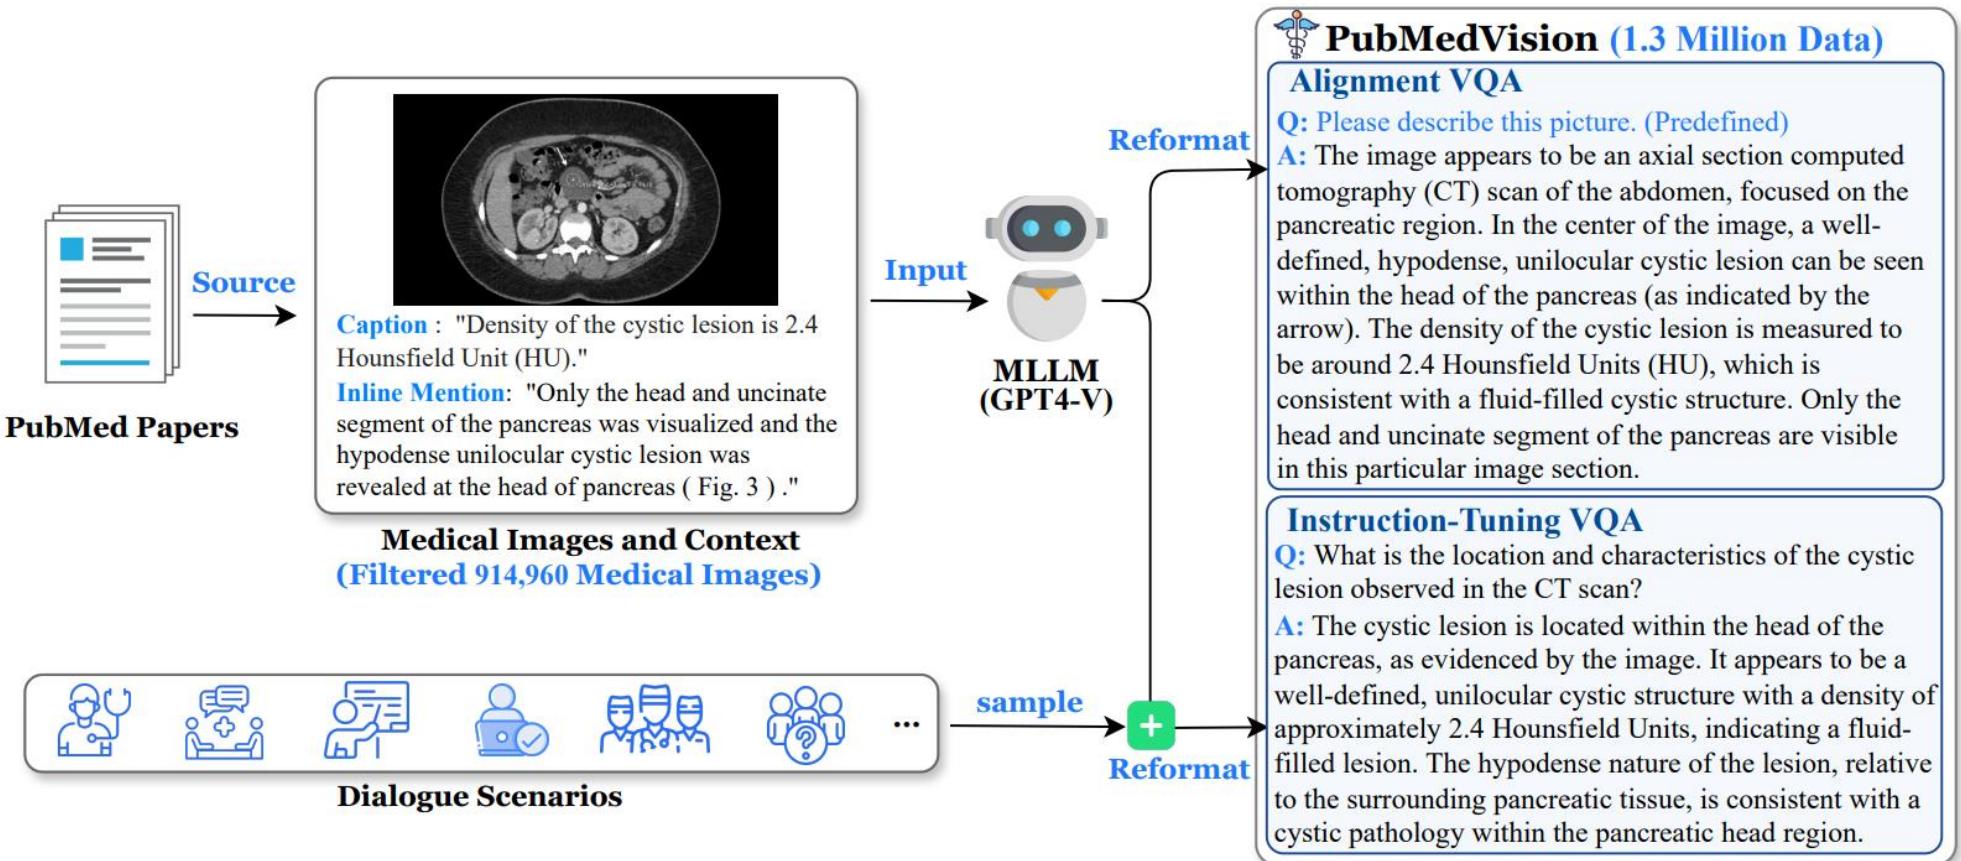

长期大量服用哪种维生素会引起严重的神经感觉异常呢？让我想想。首先，维生素A、B族维生素、C、D、E，这些都得考虑一下。不过，维生素A好像主要是和皮肤和黏膜有关，不太容易导致神经问题。维生素C和E呢，它们主要是抗氧化，应该也不会引起神经异常。维生素D呢，更多是和钙磷代谢有关，感觉也不太可能。那剩下的就是B族维生素了。

B族维生素中，维生素B1、B2、B3、B6、B12都有各自的作用，但好像B12和神经关系比较密切。不过，B12缺乏的话，通常会导致贫血和神经病变，而不是因为过量。那剩下的B1、B2、B3、B6，哪个更有可能呢？

长期大量服用维生素B6会引起严重的神经感觉异常，导致进行性步态不稳、足麻木和手不灵活。这种现象被称为维生素B6神经病，是由于过量摄入维生素B6导致的周围神经病变。因此，答案是维生素B6。

AI for Protein Structure Prediction

Protein ---The central dogma of molecular biology

- Human genome:
- Contains around 3 billion base pairs
 - Encodes ~20k genes
- Proteins are the final product of the genetic information flow
- Modern **molecular biology research**: how is life implemented by our genetic code?

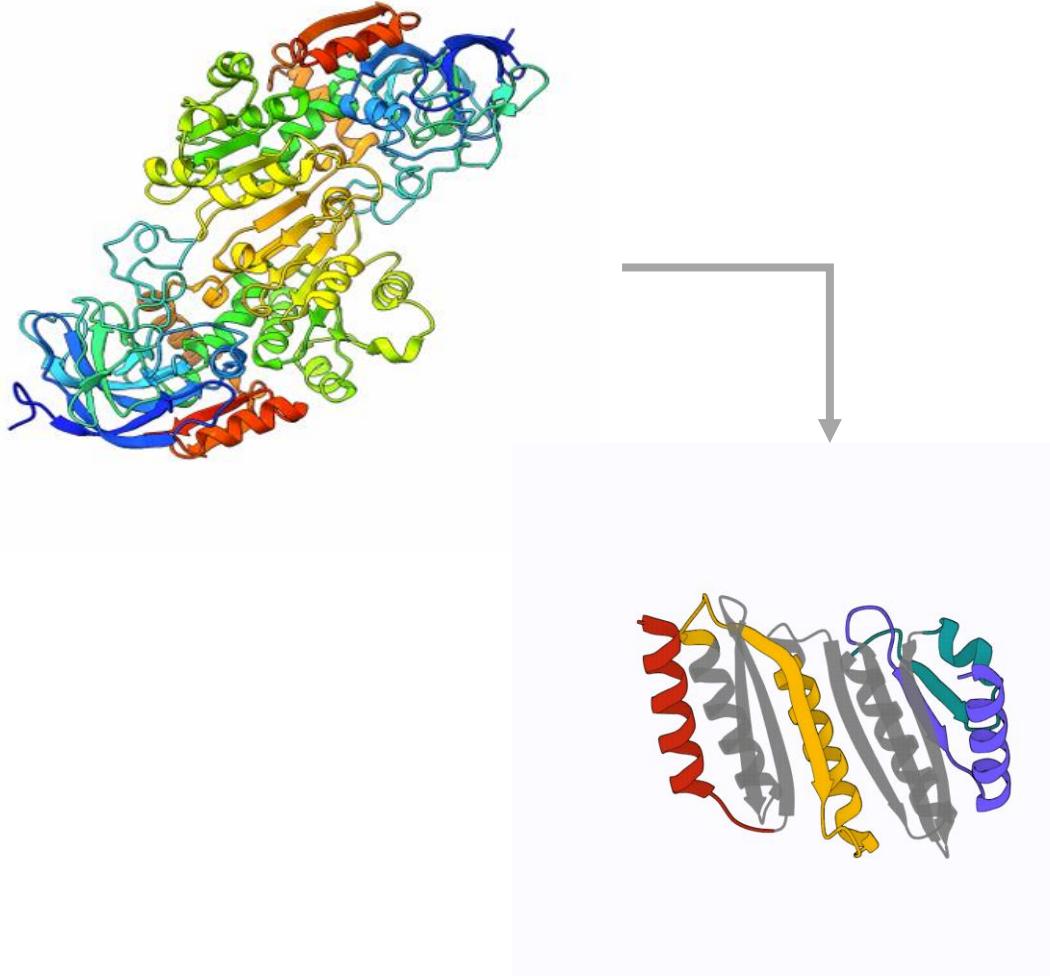

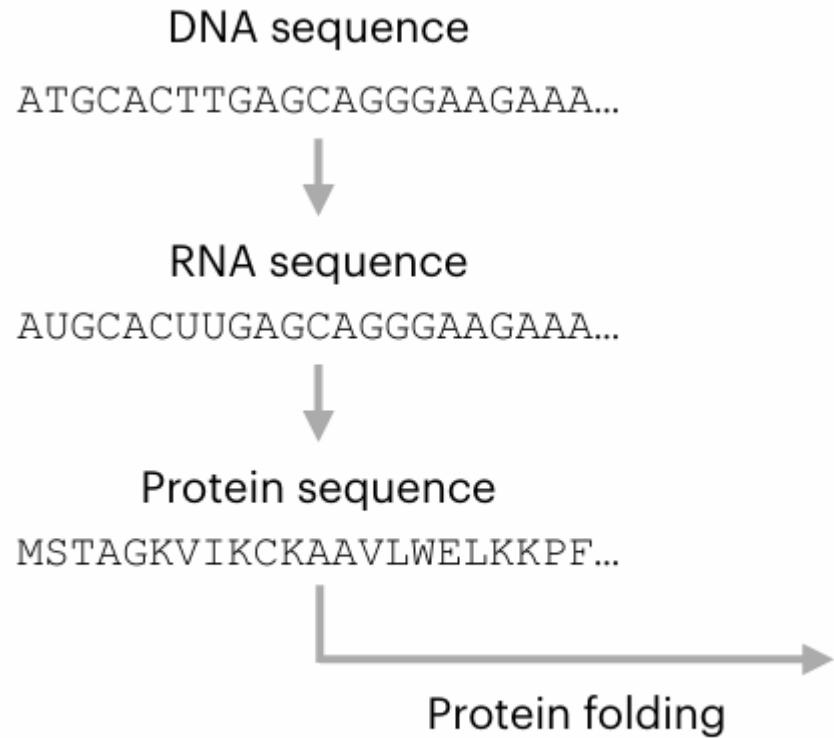

Protein Structure biology: The study of proteins and other biomolecules through their 3D structure

Cell Biology By The Numbers. Illustration by David Goodsell.

(Zaixiang Zheng et al., 2024)

Protein Structure biology: The study of proteins and other biomolecules through their 3D structure

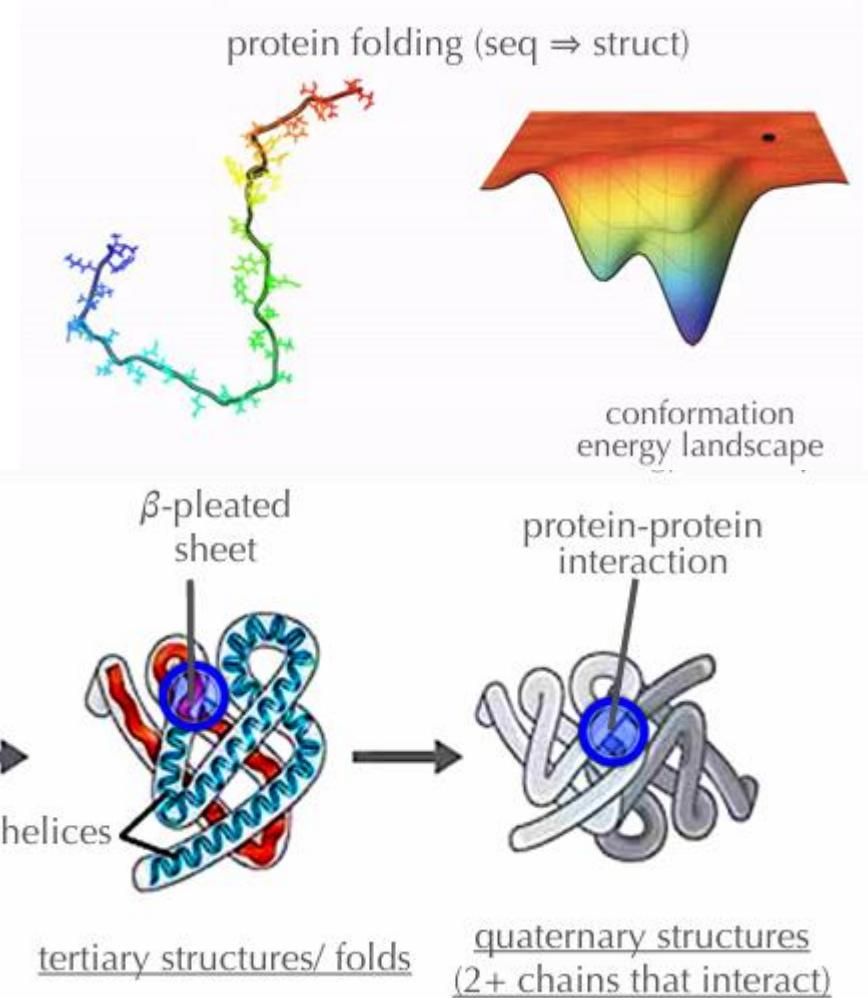

(Zaixiang Zheng et al., 2024)

Protein --- data modalities

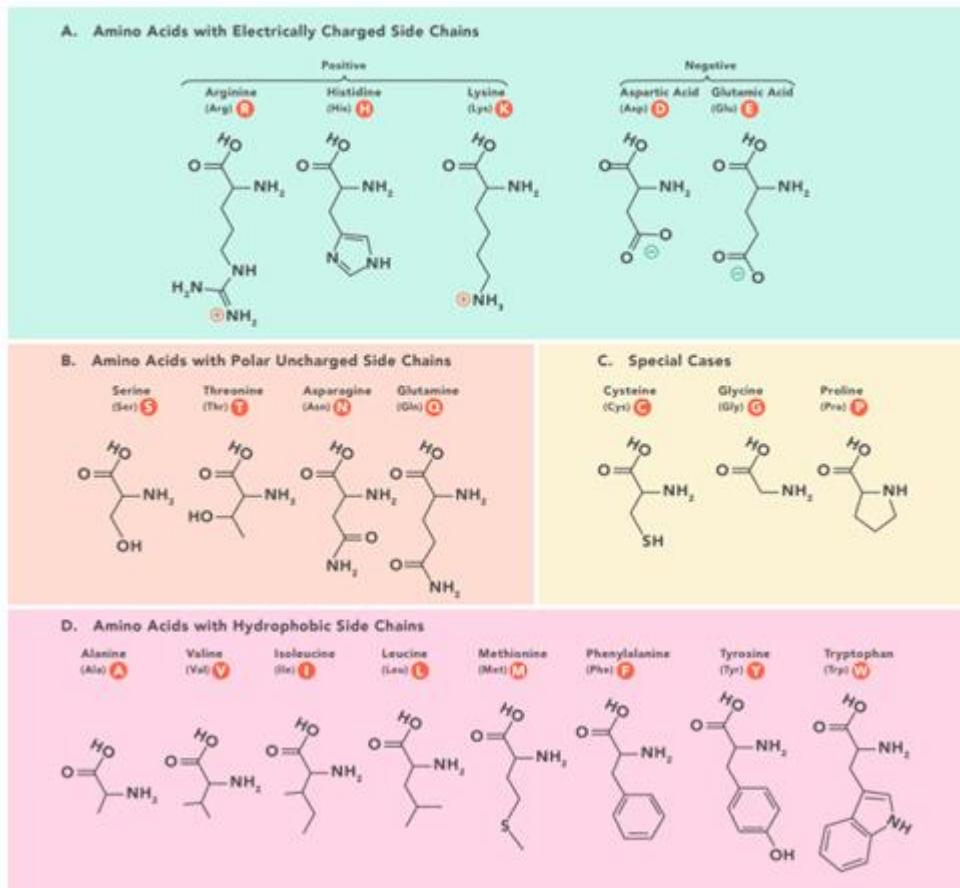

sequence \Leftrightarrow structure \Leftrightarrow function

- A sequence over 20 amino acids (AAs)
- In solvent will fold into a **unique 3D spatial structure** with minimal free energy
- **Structure determines protein function**

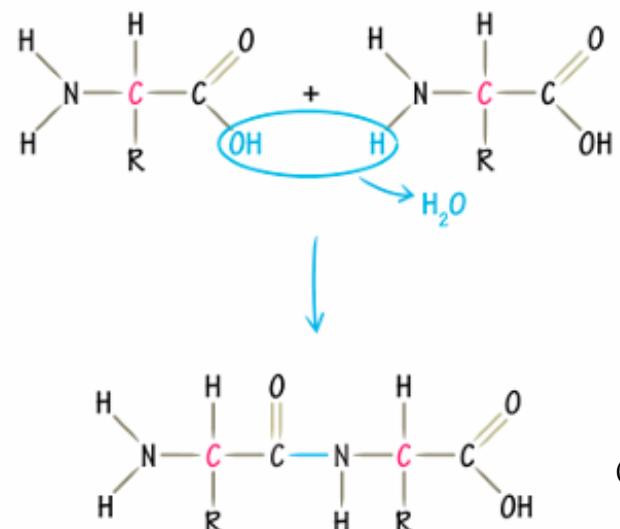

Sequence of amino acids

Sequence: 20 types of amino acids $s \in \{1\dots20\}^N$

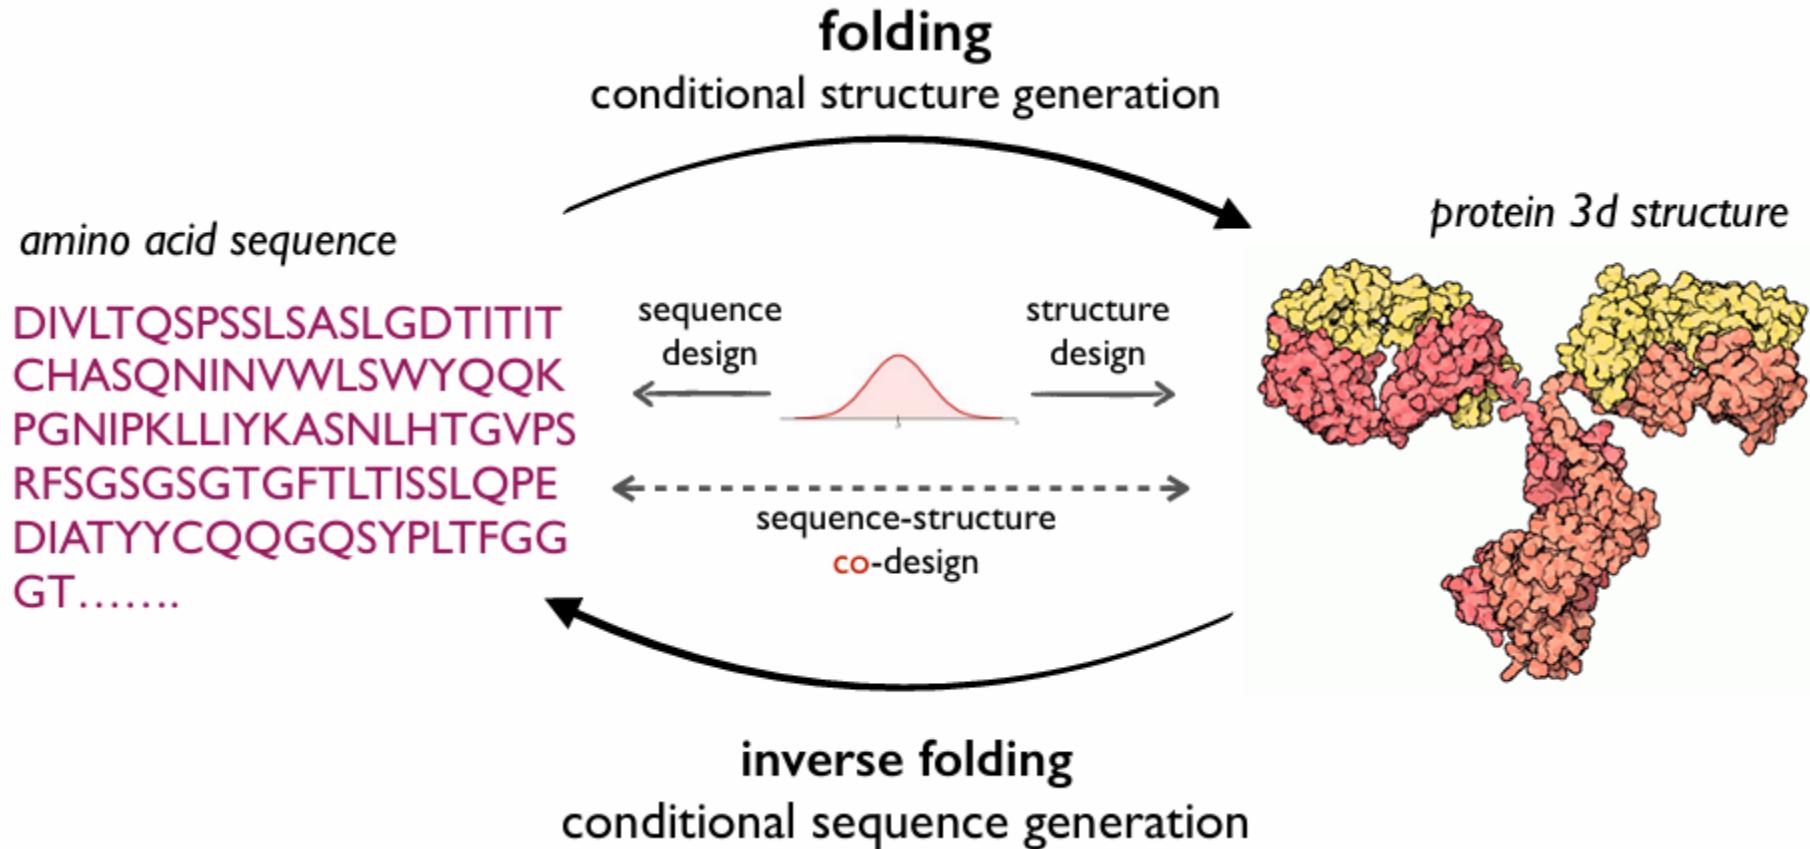

- A linear sequence of amino acids **polymerized in a chain**
- An alphabet of twenty possible amino acids
 - **Common backbone** but **different side chains**
- Various non-covalent interactions and other forces drive folding of the chain into a globular 3D structure*

Peptide Bond Formation

(Zaixiang Zheng et al., 2024)

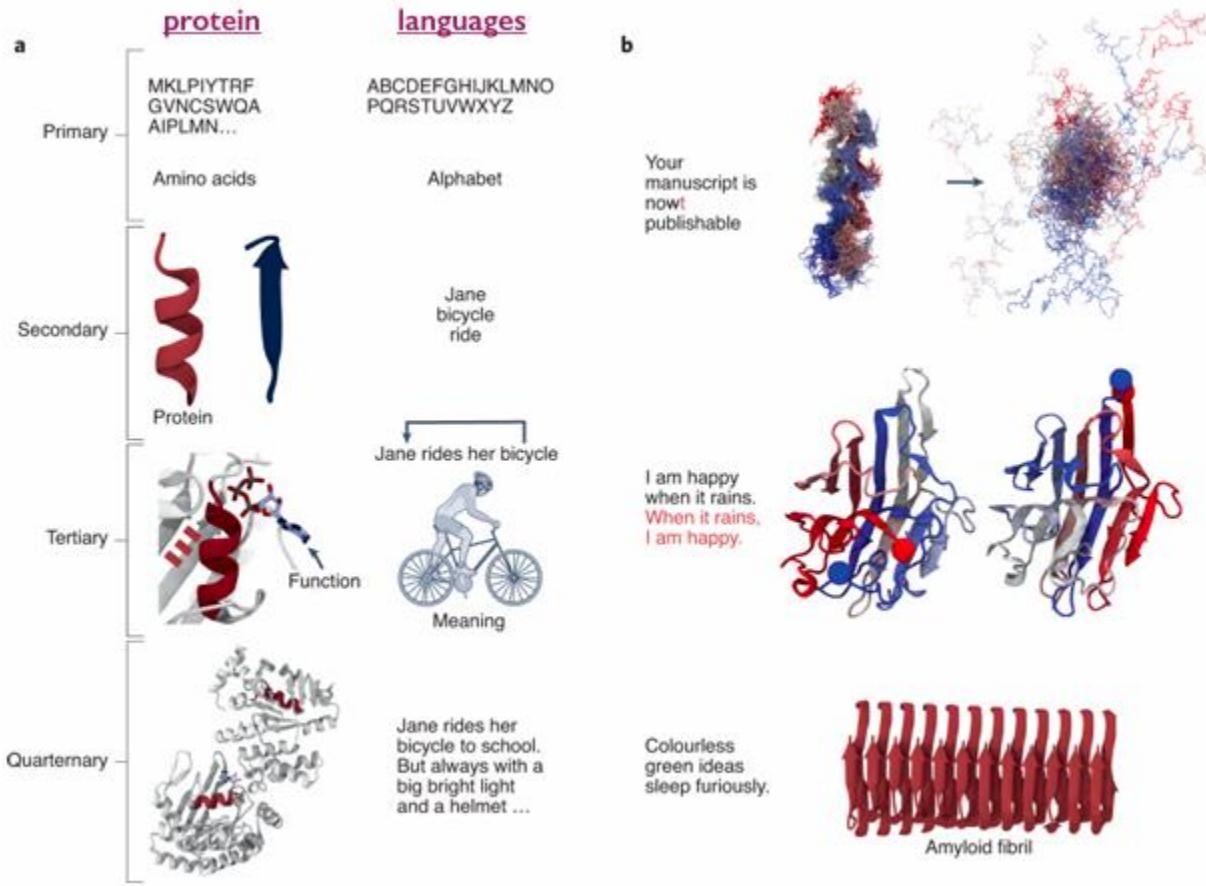

Designing protein sequence and structure as generative modeling problems

pdb id: IIGT. from <https://www.rcsb.org/structure/1IGT>

(Zaixiang Zheng et al., 2024)

Discreteness in NLP and Biology

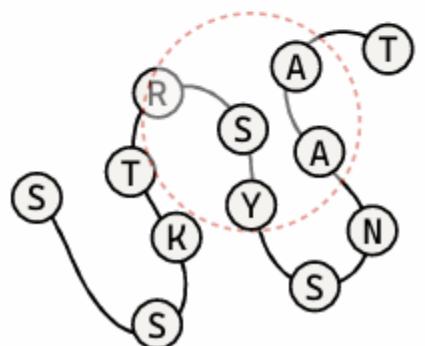

Goal: learning joint prob. of sequence of discrete tokens

$$p_{\theta}(\mathbf{x}) = p_{\theta}(x_1, \dots, x_i, \dots, x_n)$$

$$\approx \frac{1}{Z} \exp \left(\sum_i \phi_i(x_i) + \sum_{i,j} \psi_{ij}(x_i, x_j) \right)$$

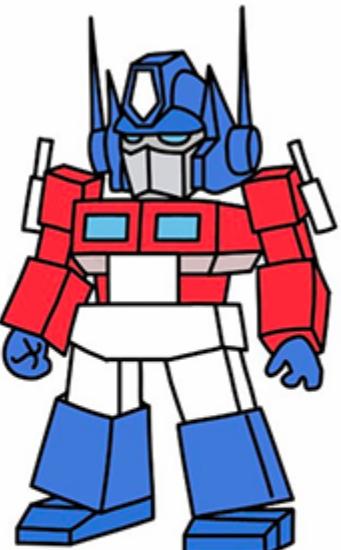

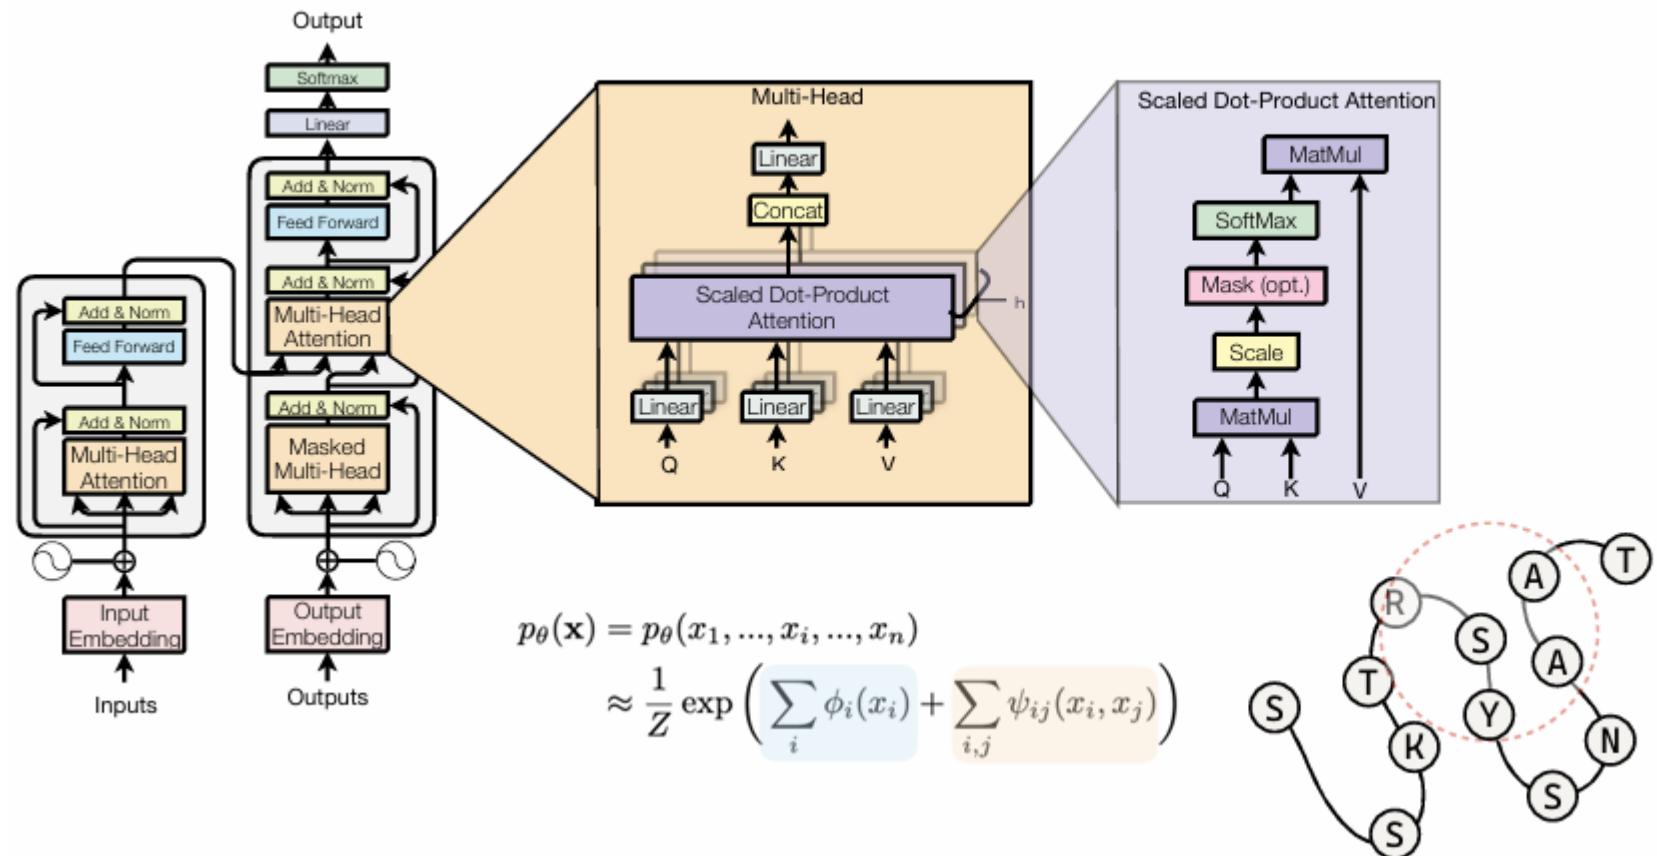

Factorization (wrt the **structures** of data) **needed!**

(Zaixiang Zheng et al., 2024)

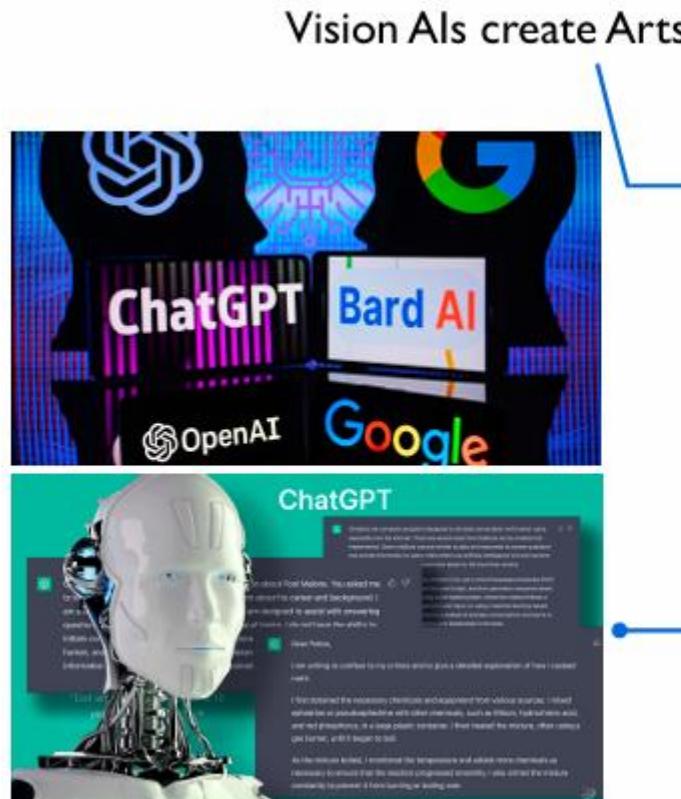

The parameterization basis of everything: Transformer - a scalable & strong learner for structured data

Why: Stacking pair-wise attention → modeling statistical dependencies inside data
 (for protein data: residue-wise structural interaction & co-evolution, etc) → approximates global data dist.

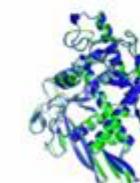

(Zaixiang Zheng et al., 2024)

Protein structure prediction: AlphaFold2 & 3

Kathryn Tunyasuvunakool, John Jumper, Demis Hassabis, and colleagues used AlphaFold to determine the structures of nearly the entire human proteome (**98.5% of all human proteins**). AlphaFold provided confident predictions for 58% of amino acid positions, with 35.7% reaching high confidence, doubling experimental coverage. At the protein level, 43.8% of proteins had at least three-quarters of their sequences confidently predicted. The authors believe large-scale accurate predictions will be a vital tool for addressing scientific questions and elucidating protein functions.

The authors believe that **large-scale**, accurate **structural predictions** will become a crucial tool, enabling us to address new scientific questions from a structural perspective. The **predictions from AlphaFold** will help further **elucidate** the roles of **proteins**.

AI for New Drug Discovery

Drug discovery and development

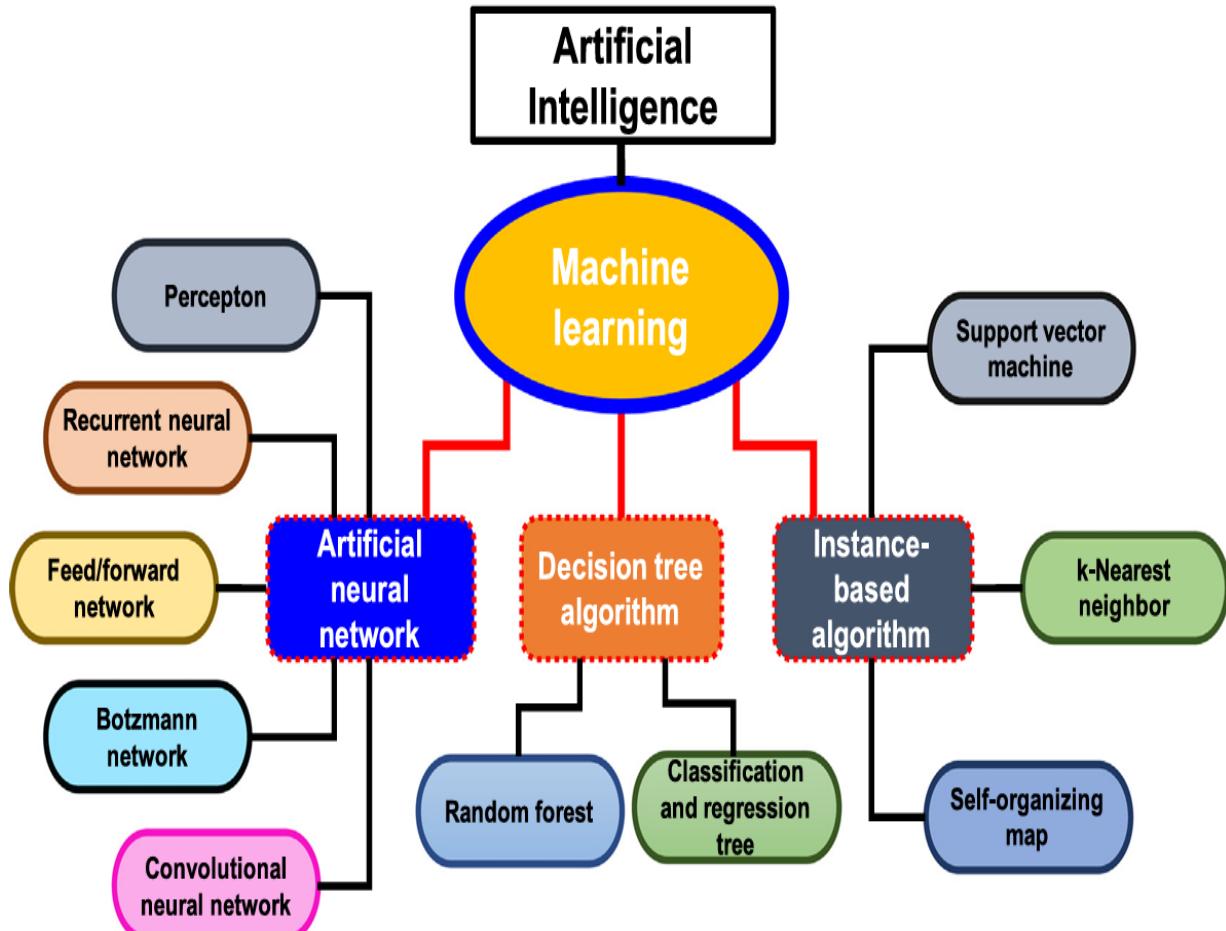

AI has the potential to revolutionize the drug discovery process, offering **improved efficiency and accuracy**, accelerated drug development, and the capacity for the development of more effective and personalized treatments ([Figure 1](#)).

However, the successful application of **AI in drug discovery** is **dependent on** the availability of **high-quality data**, the addressing of ethical concerns, and the recognition of the limitations of AI-based approaches.

Pros & Cons

Disadvantages

Loss of jobs

Lack of human touch-
empathy, emotional
intelligence.

Advantages

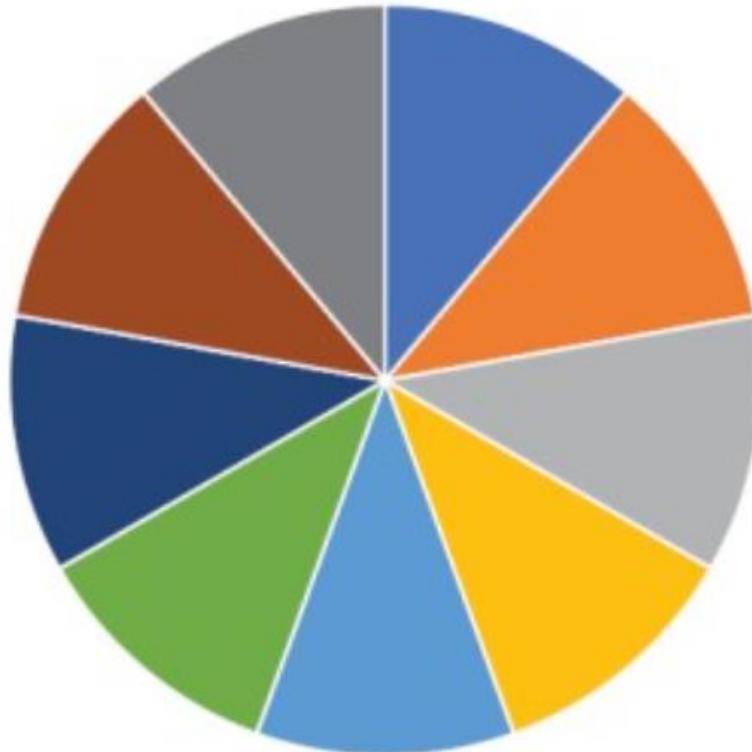

Efficiency, accuracy,
precision

Decreased workload,
Increase patient face time,
Increase time on critical
cases

Saves money, Better
monitoring

Amisha et al., 20219

Applications of artificial intelligence in health care

■ Drug development

■ Health monitoring

■ Managing medical data

■ Disease diagnostics

■ Digital consultation

■ Personalized treatment

■ Analysis of health plans

■ Surgical treatment

■ Medical teratment

[Amisha et al., 20219](#)

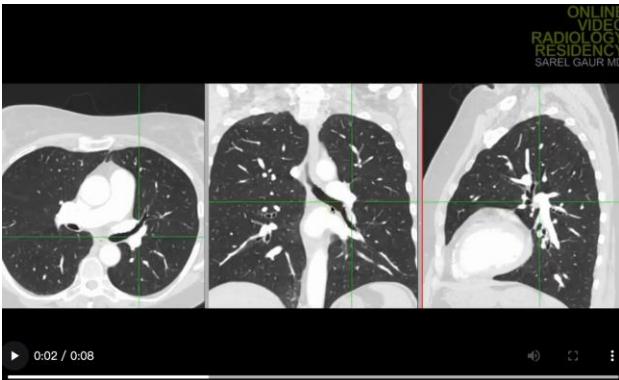

Commonly used applications

- Application 1: High-resolution image understanding
- Application 2: Video understanding
- Application 3: **Pathological image understanding / 3D medical image understanding**
- Application 4: Multi-modal Agent for social simulation
- Application 5: Agent with longer multi-modal memory

Hauto GPT2 --- demo2

国内首个区域信息平台大模型智能导诊系统，实现了导诊、咨询、科普三大功能。

华佗GPT已在龙岗区12家医院上线使用，实现了龙岗区属公立医院全覆盖，智能导诊系统（包含导诊、客服咨询、健康咨询）已服务超过24万人次，交互次数38万，分诊准确率达95.2%。

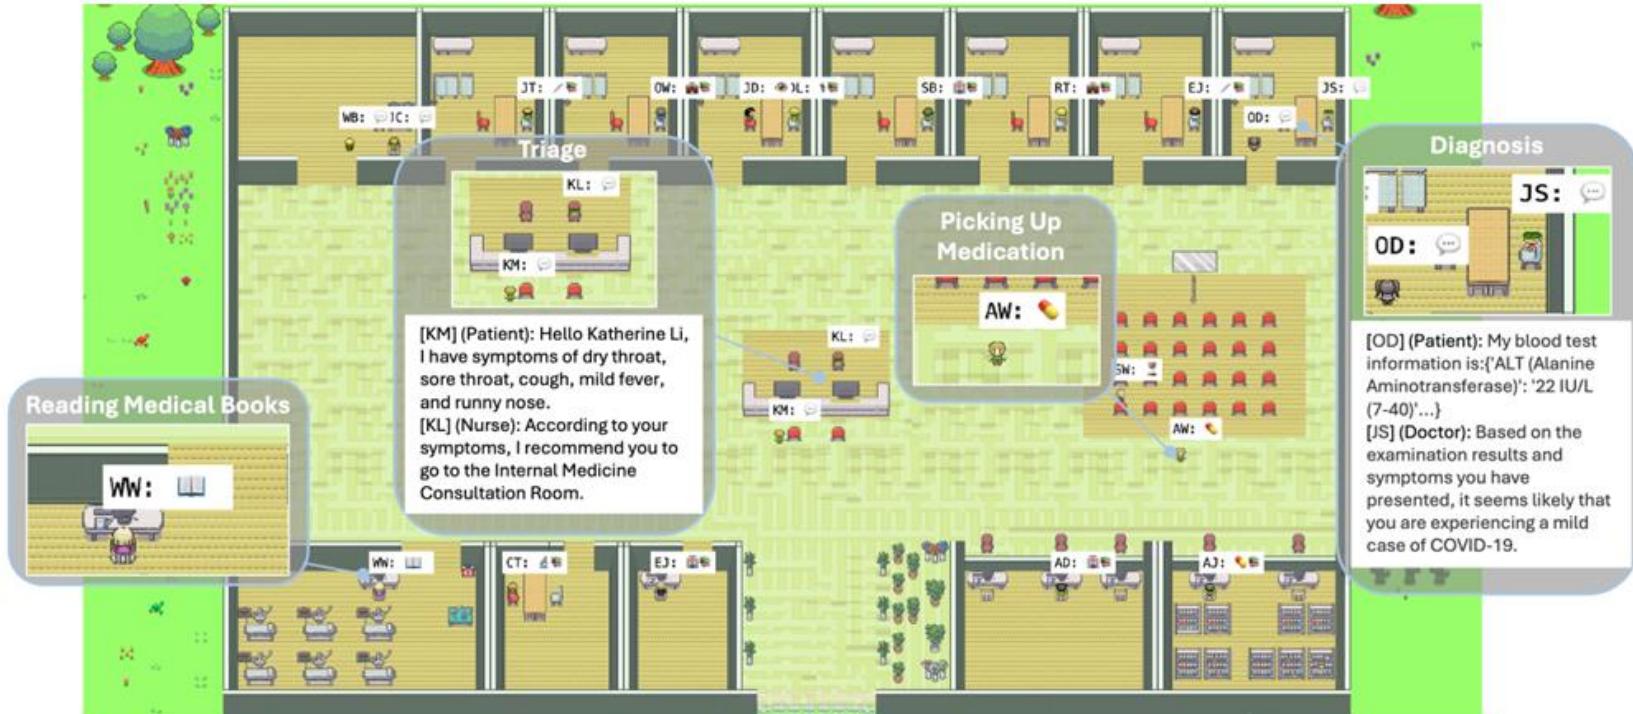

Fig. 1. An overview of Agent Hospital. It is a simulacrum of hospital in which patients, nurses, and doctors are autonomous agents powered by large language models. Agent Hospital simulates the whole closed cycle of treating a patient's illness: disease onset, triage, registration, consultation, medical examination, diagnosis, medicine dispensary, convalescence, and post-hospital follow-up visit. An interesting finding is that the doctor agents can keep improving treatment performance over time without manually labeled data, both in simulation and real-world evaluations.

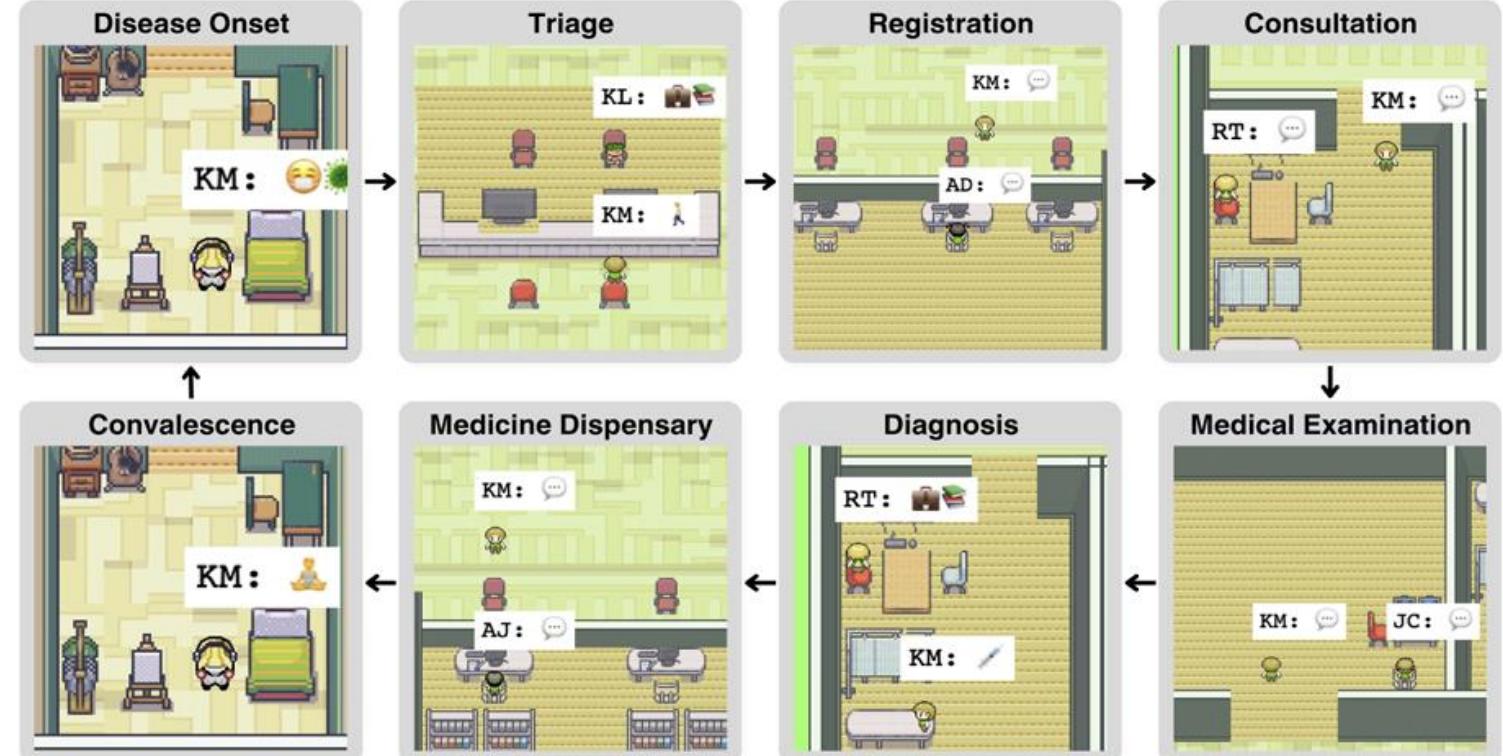

Fig. 4. Resident agent Kenneth Morgan falls ill and visits the Agent Hospital. Triage nurse Katherine Li conducts an initial evaluation of Mr. Morgan's symptoms and refers him to the dermatology department. Mr. Morgan then registers at the hospital's counter and is subsequently arranged for a consultation with dermatologist Robert Thompson. After undergoing the prescribed medical examination, Mr. Morgan receives a diagnosis and medication. He returns home to rest and monitor the improvement of his condition.

Fig. 5. The overview of the MedAgent-Zero method. This diagram illustrates the method by which **doctors achieve self-evolution**: 1) Accumulating examples and summarizing experience; 2) Adding correct responses directly to the example library; 3) Summarizing experience from incorrect responses and retesting them; 4) Incorporating successful experience into the experience library after further abstraction; 5) Utilizing both libraries to retrieve the most similar content for reasoning during the inference process.

AIR科研 | AIR打造虚拟医院，实现AI医生自我进化

来源:

发布时间: 2024-05-24

清华大学智能产业研究院 (AIR) 与清华大学计算机科学与技术系合作构建了**虚拟医院Agent Hospital**，提出了医学智能体自我进化方法MedAgent-Zero，通过在虚拟医院中产生大量无需人工标注的数据，让医学智能体不断提升医疗能力，并在真实世界数据集得到验证。Agent Hospital中所有的病人、护士和医生均由大模型驱动的自主智能体扮演，对发病、分诊、挂号、问诊、检查、诊断、开药、康复和随访的“院前-院中-院后”闭环流程进行模拟。Agent Hospital基于知识库与基础模型对虚拟病人的疾病产生与发展过程进行模拟。虚拟医生在Agent Hospital中进行学习（即阅读医学文献）与实践（即与虚拟病人交互并做诊疗决策），不断从成功诊疗案例中总结经验、从失败案例中反思教训，在多个诊疗任务上实现准确率持续提升。在诊疗近万名虚拟病人后（人类医生大约需要2年时间），虚拟医生能够在MedQA数据集呼吸道疾病子集上超越当前最好的方法，达到93.06%的准确率。该研究由AIR马为之助理研究员与AIR执行院长、计算机系副系主任刘洋教授担任论文共同通讯作者，在arXiv上公开后受到海内外人工智能社区和医学社区的广泛关注和讨论。

Table 2: Performance comparison between MMedAgent and other baselines. Cls. stands for classification. We report the relative scores for all tasks and the absolute (abs.) scores for overall performance in the last column. “-” indicates the tasks that the corresponding model is not applicable to. LLaVA-Med refers to the *60K-IM* version with only the initial query X_q and image I_q as input, while LLaVA-Med (Tool in Test) takes X_q , I_q and also the internal output from tools X_{result} as input.

Task		User Input		LLaVa-Med Output		MMedAgent Output
Classification		<p>What imaging modality is shown in this picture?</p> 		<p>The image shows a microscopic histological analysis of the defect site treated with different treatments. The specific imaging modality is not mentioned, but it is likely that the image was taken using a microscope to visualize the tissue samples.</p>		<p>The image is an example of a immunohistochemistry histopathology image.</p>
Grounding (Disease)		<p>Is there a tumor in this brain scan? Detect and describe it.</p> 		<p>The MRI image shows the presence of a tumor in the brain. The tumor appears to have a heterogeneous signal, meaning that it has areas with different intensities. It is important to note that the interpretation of MRI images should be done by a trained professional, such as a radiologist or ...</p>		<p>The tumor in the MRI brain image is located with bounding box coordinates [0.32 0.24 0.76 0.55]. This indicates that the tumor is situated in the central region of the brain, extending from the upper middle to the lower middle area, and towards the right. This information is crucial for further medical evaluation and treatment planning.</p> 
Grounding (Cell)		<p>Count and label all the cells in this histology image.</p> 		<p>As an AI language model, I cannot view the actual image. However, I can help you interpret the histology image by discussing the different cell types and structures that you may encounter. In general, histology images show tissue samples stained with specific dyes to highlight ...</p>		<p>Based on the detection results, the image contains a total of 15 cells. The bounding boxes for each cell are provided below, indicating their locations within the image:</p> <ul style="list-style-type: none"> 1. Cell 1: [0.15, 0., 0.25, 0.14] ... 15. Cell 15: [0.97, 0.53, 1., 0.66] 
Grounding (Organ)		<p>Can you identify the kidney, liver, and stomach in this abdominal CT image and describe them?</p> 		<p>Sure, in the 2D abdominal CT image, the kidneys are likely to appear as two large, bean-shaped structures with renal arteries and veins branching off from the aorta. The aorta is ... To accurately segment these structures in the image, I would first identify the renal arteries and veins, then the aorta, and finally, the duodenum.</p>		<p>Based on the detection results, here's a summary of the organ locations within the image:</p> <ul style="list-style-type: none"> 1. The first kidney is located at the right middle part of the image, with bounding box coordinates [0.3, 0.54, 0.4, 0.62]. ... 4. The liver is on the middle left in the image, with bounding box coordinates [0.43, 0.39, 0.63, 0.47], it is larger than kidney in this slice. 

Grounding (Organ)

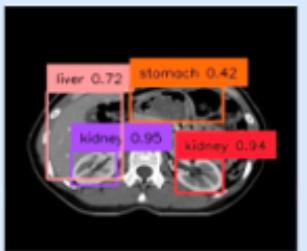

Can you identify the kidney, liver, and stomach in this abdominal CT image and describe them?

Sure, in the 2D abdominal CT image, the kidneys are likely to appear as two large, bean-shaped structures with renal arteries and veins branching off from the aorta. The aorta is ... To accurately segment these structures in the image, I would first identify the renal arteries and veins, then the aorta, and finally, the duodenum.

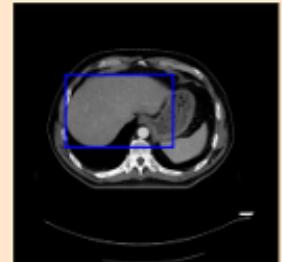

Based on the detection results, here's a summary of the organ locations within the image:

1. The first kidney is located at the right middle part of the image, with bounding box coordinates [0.3, 0.54, 0.4, 0.62].
...
4. The liver is on the middle left in the image, with bounding box coordinates [0.43, 0.39, 0.63, 0.47], it is larger than kidney in this slice.

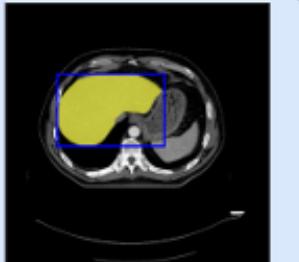

Segmentation

Is it possible to use bounding boxes [0.2, 0.28, 0.6, 0.55] to segment the Liver in this medical image?

Yes, it is possible to use bounding boxes to segment the Liver in this medical image. Bounding boxes are rectangular regions that are drawn around the desired area of interest, in this case, the Liver. By providing the coordinates of the top-left and bottom-right corners of the bounding box, it is possible to train the AI system ...

The segmentation result is displayed below to assist with your medical evaluation:

Can you locate and segment the kidneys, spleen, and liver in this 2D abdominal CT image?

Based on the bounding box coordinates and detection model output, here's a summary:

1. The first kidney is located towards the left middle of the image, with bounding box coordinates [0.31, 0.52, 0.41, 0.66].
2. The second kidney is on the right middle part of the image, with bounding box coordinates [0.57, 0.54, 0.69, 0.64].
3. The spleen is positioned towards the right middle of the image, with bounding box coordinates [0.66, 0.42, 0.73, 0.6].
4. The liver is located towards the left upper part of the image with bounding box coordinates [0.26, 0.41, 0.36, 0.63].

Based on the detection and segmentation model, the image segmentation result is as follows:

Can you locate and segment the kidneys, spleen, and liver in this 2D abdominal CT image?
